For 25 years, Hydreco Marine has been dedicated to creating marine solutions that go beyond expectations.

Our journey is marked by a legacy of continuous innovation and an unwavering commitment to excellence. Over these 25 years, we haven't just earned a prominent place in the market; we've become synonymous with trust and quality.

What sets us apart?

It's our passion for every detail, the relentless pursuit of modernization, and the unparalleled care we dedicate to every stage of our product creation. Each solution bearing the Hydreco Marine name carries the essence of our team, our family, and, above all, our profound respect for you, our customer.

And what do you gain from this?

By choosing Hydreco Marine, you're trusting a brand that puts your needs at the center of everything. Our dedication isn't just to create products but to create real value for you, returning your trust with solutions that exceed your expectations.

Join us in this pursuit of luxury and innovation and discover why, for 25 years, we've been the choice for those who aren't satisfied with the ordinary.

INNOVATIVE MARINE SOLUTIONS

Our Values

Ethical conduct, respecting clients, employees, and the community, always focusing on the client and the quality of delivery through harmony in internal and external relationships, are the main ingredients of Hydreco Marine's values.

Our Mission

To constantly seek the development and delivery of quality products, meticulously conceived, designed, and produced, that bring comfort, luxury, and safety to our

TENDER LIFT

The submersible stern platform provides easy access to the water for leisure activities and connects life aboard with the sea. A dinghy or jet ski can be placed on this platform, making launching easier. When submerged, the platform also stabilizes the anchored boat so you can enjoy life aboard with complete tranquility.

i The sliding version is also available.

FUN DECK

No experience is off-limits with the versatility of Hydreco's FunDeck. This compact and lightweight product suits vessels of various sizes. The design provides more space for entertainment and fun, expands the stern area, and facilitates sea access for those on board.

OPEN DECK

More than just a boat, the OpenDeck is a retreat for leisure and fun. With ample space, it's ideal for intimate events, family gatherings, or fishing trips. Its automatic hydraulic system and marine-grade stainless steel structure ensure robustness, elegance, and smooth movements. Get more space, freedom, and easy access to the sea with just a button.

HYDRAULIC GANGWAY

Hydreco Marine's hydraulic gangways feature telescopic movement and are ideal for facilitating crew boarding and disembarking. They have a load capacity of 150 to 400 kgs and can be operated by a control panel or remote control. It's the ideal solution to ensure comfort and safety when accessing the vessel.

SEA STAGE

The Sea Stage is a multifunctional platform installed at the stern of the vessel. It can be positioned for use as a gangway, swim ladder, lifting or loading platform, and also increases the size of the stern when fully opened horizontally.

OUTBOARD PLATFORM

This is a multi-purpose hydraulic system installed at the stern of boats with outboard motors. It facilitates access to the water and provides additional stability when anchored.

LINEAR PLATFORM

This is a linear lifting system designed for vessels requiring vertical travel, ideal for sterns integrated with jets, tenders, or retractable decks.

HYDRAULIC FLAPS

ELETRIC FLAPS

HYDRAULIC AND ELECTRIC FLAPS

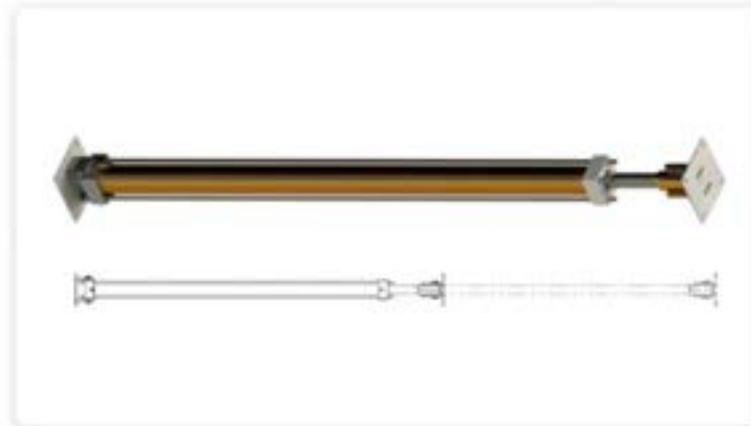

Flaps help the vessel plane and reach cruising speed, leading to a reduction in fuel consumption. Additionally, in cases of lateral imbalances caused by weight distribution, they assist in stabilizing the vessel by adjusting the bow and sides.

HYDRAULIC KEELS

Being able to navigate in shallow waters, where the depth is just enough for the vessel to float, is one of the great advantages of a retractable hydraulic keel. Our team develops and executes the project, opening up a new ocean for you to sail. Together with Parker and Recopeças, we developed and installed the retractable keel for the Kat sailboat, for the Vozes do Oceano Project.

ENGINE HATCH

Engine hatches with hydraulic cylinders are designed to meet the diverse needs of boat owners, ensuring safety and comfort during voyages. These cylinders have a single fluid inlet and generate compressed linear motion in one direction, either inward or outward. This is a way to reduce physical force through hydraulic potential energy.

SPECIAL PROJECTS

Total customization from design to installation.

Our extensive experience and passion for the sea allow us to serve both shipyards that mass-produce boats and special projects for vessels of all sizes and for all adventures. You bring your challenge, and we'll take care of everything from design to installation.
